Good Afternoon Gentlemen,

Sorry for the delay getting this email out, I'm running behind...:)

In regards to camera placement preference:
1. light pole
2. Traffic signal
3. Flock Pole (we install a 12 foot pole)

Flock cannot install a camera on a CalTrans pole, they will not provide a permit. Cameras deployed solar need good southern exposure. Each camera will capture 2 lanes of traffic in the same direction. Optimum distance from the camera to the target image capture is 45-60 feet. If the city prefers to wire in a camera out of need or preference, I have attached our requirements to this email. Please note, flock does not provide electrical services, it is up to the city to wire the cameras.

Here is the best overview video I can find:

https://www.flocksafety.com/product-overview/

Thank you both again for your time yesterday. I hope you got good insight from Rich. Let me know what else I can do to assist with a successful deployment in Santa Maria.

Best Regards,

Jesse Mund
